

Lab Exercise 7 : Java Script Form Validations

Overview

You will create JavaScript prevalidation for the form in old form

Instructions

1. You will need to link to an **external JavaScript file** in the head of the page so that you can write code in its own file.
2. You should define a **CSS style to use when highlighting a blank field**.
3. Set up a **listener on the form's submit** event so that the code prevents submission of the form (preventDefault()) if either the **title or description field** is left blank or the accept license box is not checked, but otherwise submits the form.
4. Enhance the JavaScript so that blank fields trigger a change in the appearance of the form (using the style defined earlier).
5. Add another listener to the fields so that when the user types into a field (changed event) JavaScript removes the red color you just added.
