Ex 2	This exercise is the first step in the creation of a CRM website. In this project you will be augmenting the provided page to use semantic HTML5 tags. **Instructions** 1. Open ex2.html in the editor of your choice, and in a browser. In this project the look of your page will remain unchanged from how it looks at the start as shown in below Figure. 2. Reflect on why adding semantic markup is a worthwhile endeavor, even if the final, rendered page looks identical. 3. Replace and supplement generic HTML tags like <div> with semantic tags like <article>, <nav>, or <footer> (for example). Some parts make sense to wrap inside a tag such as <section> or <figure>. **Test** 1. Firstly, test your page side by side with the original in a browser to make sure it looks the same. 2. Validate the page by either using a built-in tool in your editor, or pasting the HTML into http://validator.w3.org/ and seeing if it passes.
